

Launch Mission Execution Forecast

Mission: Atlas V STP-3

Issued: 3 Dec 2021 / 0800L (1300Z)

Valid: 5 Dec 2021 / 0404 – 0604L (0904 – 1104Z)

Forecast Discussion: High pressure will build at the surface over central Florida through Saturday. This will keep us dry for MLP Roll day today with light winds and near average temperatures. The surface high retreats into the Atlantic Ocean slightly Sunday into Monday, bringing light winds Sunday becoming from the south on Monday, and a slight chance for isolated low topped showers near the coast, especially on Monday. Therefore, the primary concerns for both launch day and backup day are the Cumulus Cloud Rule.

Probability of Violating Weather Constraints																									
Launch Day	10% Primary Concerns: Cumulus Cloud Rule

Clouds				Solar Activity: Low	Type	Coverage	Base (ft)	Tops (ft)	Temp/Humidity:	65-67°F / 92%	Cumulus	Scattered	2,000	10,000		Ground Winds (230'):	180° @ 6 - 10 knots	Cirrus	Scattered	25,000	28,000
	Weather/Visibility:			Isolated Showers / 7 mi.	Clouds				Solar Activity: Low																
Type		Coverage	Base (ft)		Tops (ft)																				
Temp/Humidity:	65-67°F / 92%	Cumulus	Scattered	2,000	10,000																				
Ground Winds (230'):	180° @ 6 - 10 knots	Cirrus	Scattered	25,000	28,000																				

Note: The Probability of Violation (POV) is the chance that a Lightning Launch Commit Criteria (LLCC) or certain user constraints (surface winds, precipitation, and temperatures, etc.) will be violated during the launch window. It does not take into account upper-level wind shear and solar activity.

Next Forecast Will Be Issued 4 Dec 2021
